27ο Εθνικό Συνέδριο «Ενέργεια & Ανάπτυξη 2023»

IENE 14-15 NOVEMBER 2023

Andreas Petropouleas Energy Management Director

Day Ahead Average Prices in Europe (1 January - 31 October 2023)

Key Drivers of Competitiveness in the Electricity Market

Market-Related Factors:

- Market Integration and Cross-border Trade
- Supply and Demand Balance
- Generation Mix
- Fuel Prices
- Operational Efficiency
- Dominant Player Dynamics
- Market Liquidity
- Interconnections
- Renewable Penetration
- Technology and Innovation
- Flexibility

Regulatory Factors:

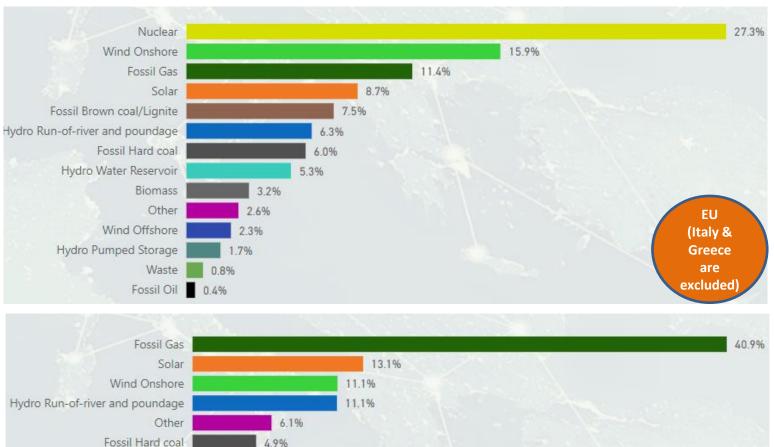

- Government Policies and Subsidies
- Network Access and Tariffs
- Carbon Pricing and Emissions Trading
- Environmental Regulations
- Capacity Mechanisms
- Renewable Energy Policies
- Cross-Border Trading Rules

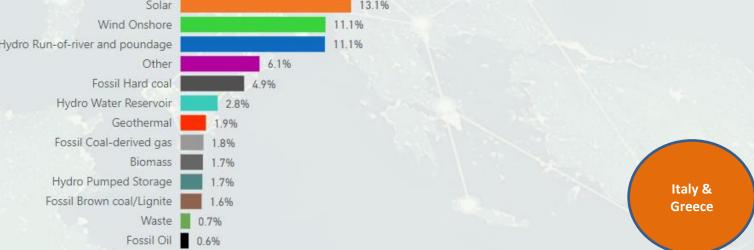

External Factors:

- Global Fuel Markets
- Economic Conditions
- Weather Conditions
- Geopolitical Events
- Technological Disruptions

Let's concentrate on the energy generation mix -EU vs Italy & Greece (1/1/23-31/10/2023)

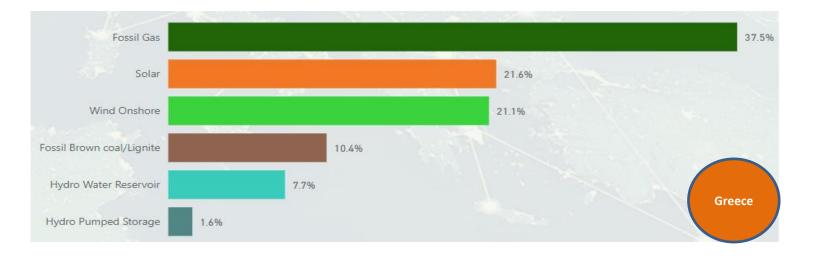

4

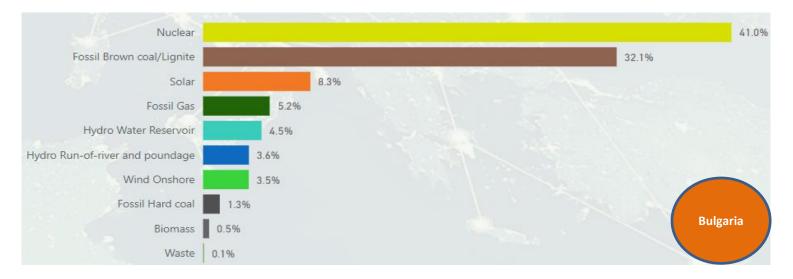

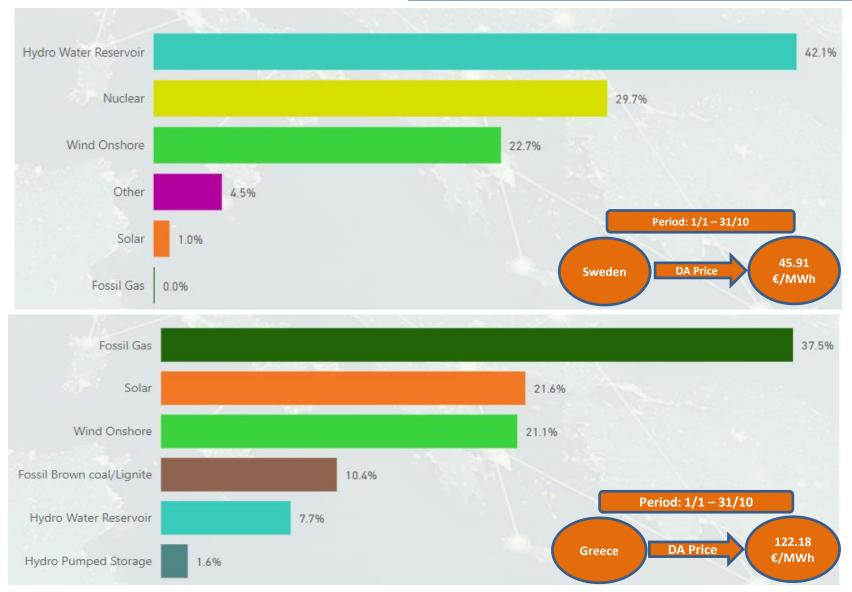

Generation Mix – Greece vs Bulgaria (1/1/23-31/10/2023)

Is it possible for Greece to be more competitive than Sweden?

- July 2022: Elimination of the adjustment clause in low voltage (LV) bills. Energy companies are required to publish their price lists for month M by the 20th calendar day of the preceding month (M-1).
- 8 July 2022: Introduction of a new wholesale mechanism with caps on producers' revenues in the Day-Ahead Market.
- **7 October 2022:** The aforementioned mechanism has been extended to include the intraday market (Continuous Intraday Markets CRIDAs).
- O 1 November 2022: Implementation of a €10/MWhg levy on the quantities of natural gas used exclusively by Greek electricity producers.
- O 1 January 2023: A €2.49/MWhg levy is imposed on natural gas power plants, following the publication of RAE's updated Emergency Plan, as a measure to ensure the security of the gas supply.
- 2 January 2023: The cap on wholesale prices is also extended to the XBID (Cross-Border Intraday) market.
- O 1 March 2023: Modification of the natural gas (NG) levy from €10/MWhg to <u>5% based on the TTF Month-Ahead (MA) index</u>, and a proposal to tax a portion of the profits in the retail sector.
- 18 May 2023: Extension of the "Temporary Mechanism for Day-Ahead and Intraday Market Partial Revenue Return" until 30 September 2023.
- 29 June 2023: Revision of the levy for Security of Supply. The costs of RAE's Emergency Plan for 2022-2023 will be recovered gradually until 2027, as the costs are too substantial to be fully recuperated within a single year.
- **28 July 2023:** Further extension of the validity period of the "Temporary Mechanism for Day-Ahead and Intraday Market Partial Revenue Return" until 31 December 2023.
- **November 2023:** Introduction of a formula for taxing the 'extra' revenues of suppliers between August 2022 and June 2023.
- November 2023: A ministerial decision is pending on the implementation of a single variable tariff formula.

The Greek market and its participants have become less competitive than their neighbors due to levies

Due to NG levies/charges, the Greek market became more expensive than neighboring markets, resulting in a 80% increase in imports.

How can Greece's Electricity market stay competitive with hydroelectric resources controlled by one company?

CCGTs Variable cost: ~ 123 €/MWh Hydro Variable cost: ~ 5 €/MWh

Capacity Mechanism more than necessary

Import Hydro Lignite Natural Gas RES

 To address the need for flexibility and ensure the availability of system capacity, a <u>capacity remuneration mechanism</u> is necessary. Furthermore, a capacity mechanism helps to mitigate the effects of high prices

THANK YOU ANDREAS PETROPOULEAS
